

Calculator

ABSTRACT OF THE DISCLOSURE

The present invention is a calculator that comprises a body, a couple device and a display unit. The body has several press groups placed on its one side and a display containing space placed on the other side which used for containing the display unit. The display unit comprises a main panel and an assistant panel. The main panel and the assistant panel are placed on two joint planes. The couple device joining the body and the display unit allows the display unit rotate around the couple device. Users can make the display unit to stay on open status and closed status by pushing the display unit. The present calculator shows calculating information to users opposite each at the same time.
